Bedding Supports

EH 23220.

Product Description

The bedding support is used to **support** overdetermined clamping points on components.
The benefits of the bedding support are:
• Support for unstable components, without distortion
• Eliminates tool vibration during machining
• Compact, low construction
• Supports ribs, beads and shackles, for reinforcement of clamped components
• Distortion-free support of raw parts
• Easy handling
• Flat and long design allows clamping with adjustable clamping lever even outside the workpiece.

Material

Handle
• Zinc die-cast

Clamp
• Steel, case-hardened, blackened, ground

Operation

1. By releasing the clamping lever, the support bolt contacts the workpiece with a light spring load.
2. By clamping the clamping lever, the support pin is blocked without displacement.
3. The clamping lever is released after removal of the workpiece. Then push the support pin into the starting position and clamp using the lever.

By screwing grub screws or supports into the support pin's female thread, the support height can be adjusted.

Drawing

Sizes 8,5 x 75, 13 x 150 and 17 x 170 have only one slot.
